

Licencing Information

FutureMedia offers both Offline and Online video licencing options.

OPTION 1 - OFFLINE VIDEO LICENCE

An Offline Video Licence provides the licensee the option of viewing, accessing and storing the video content from/on multiple devices in an offline environment. The video content is supplied as a digital video file (eg.mp4) by the copyright owner- FutureMedia Pty Ltd. The video content has been licenced for its intended use only and strictly prohibits any other use.

Conditions of use for the video content with an Offline Video Licence include:

- The video file must not be uploaded to any online platform such as company intranet, Internet, or Learning Management System, where it can be accessed and viewed via an online connection.
- The video file is for training purposes and internal company use only.
- The video file can be accessed and delivered through multiple devices providing they are all in an offline environment i.e. a laptop computer, desktop computer, USB thumb drive or portable hard drive.

The offline licence does not allow for any editing or modification of the video content. Permission must be granted from the producer for this to occur.

OPTION 2 – INTRANET LICENCE

The intranet licence allows company employees to access the training via computer or other devices 24/7.

Benefits:

- Saves additional time and money involved in setting up group training sessions for large numbers of people, as one can train employees at minimal cost per person.
- Employees can download associated handouts.
- This provides company-training via individual computers in the same way shared work files are accessed.
- The advantage of an intranet licence is that it allows for self-based training which can be beneficial in working around constraints such as shift work.

Cost: We offer a licencing agreement authorising the use of the program on a company's intranet. The licence fee is based on the number of employees. The cost will also be determined by the terms of the licence period e.g. one, two or three years, or in perpetuity.

Licencing Information

Steps to setting up intranet learning from a company intranet:

Once a licence agreement is completed. We then supply digital media (containing enriched files) of the program and training support material.

Your IT department loads the files onto your intranet server.

Company personnel can log in and view the video content simply by connecting to the company's intranet.

OPTION 3 – CORPORATE LICENCE

A Corporate Licence will provide unlimited access to the training programs for all employees 24/7 in perpetuity. The content may be used in various formats and applications best suited to your safety training programs and objectives via DVD, intranet, and/or secure protected internet. The content becomes available to use, in perpetuity, at a one-off fixed price. It also allows for your corporate branding.

A Licence Quote is provided based on the number of employees. Once a licence agreement is completed we will supply the following training materials:

- Electronic video files which can be customised with your corporate logo/safety message/branding. The licence precludes the content being used by any companies other than your company. To that effect all digital files must bear the company name and logo and a copyright warning in that regard.
- All relevant training support material.
- Copyright permission to replicate all the training material (video, PPT, assessment, etc.) on CD or host on your intranet for the all employees within your company. This also includes permission to produce additional language versions of the video and support material.
- Lifetime licencing- no annual renewals.

Companies using licenced programs include: Chevron, Coffey, Newcrest Mining, Origin Energy, Rio Tinto, Woodside Energy.

To arrange for a quote please contact us: info@futuremedia.com.au
